

Session 1

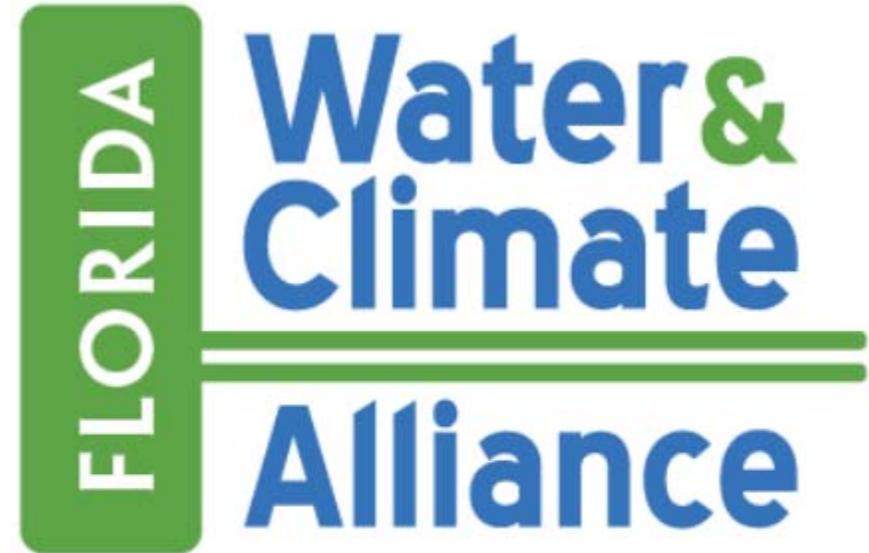

The Florida WCA Learning Network

March 30, 2016

OUC Pershing Facility in Orlando, FL

Kevin Morris

What is the FWCA?

Floridawca.org

A climate learning network that convenes scientists and practitioners in iterative knowledge co-production

A climate learning network

Actionable climate science

Domain

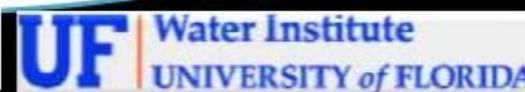

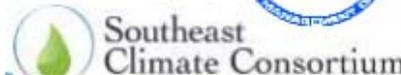

Learning together

Community

Practice

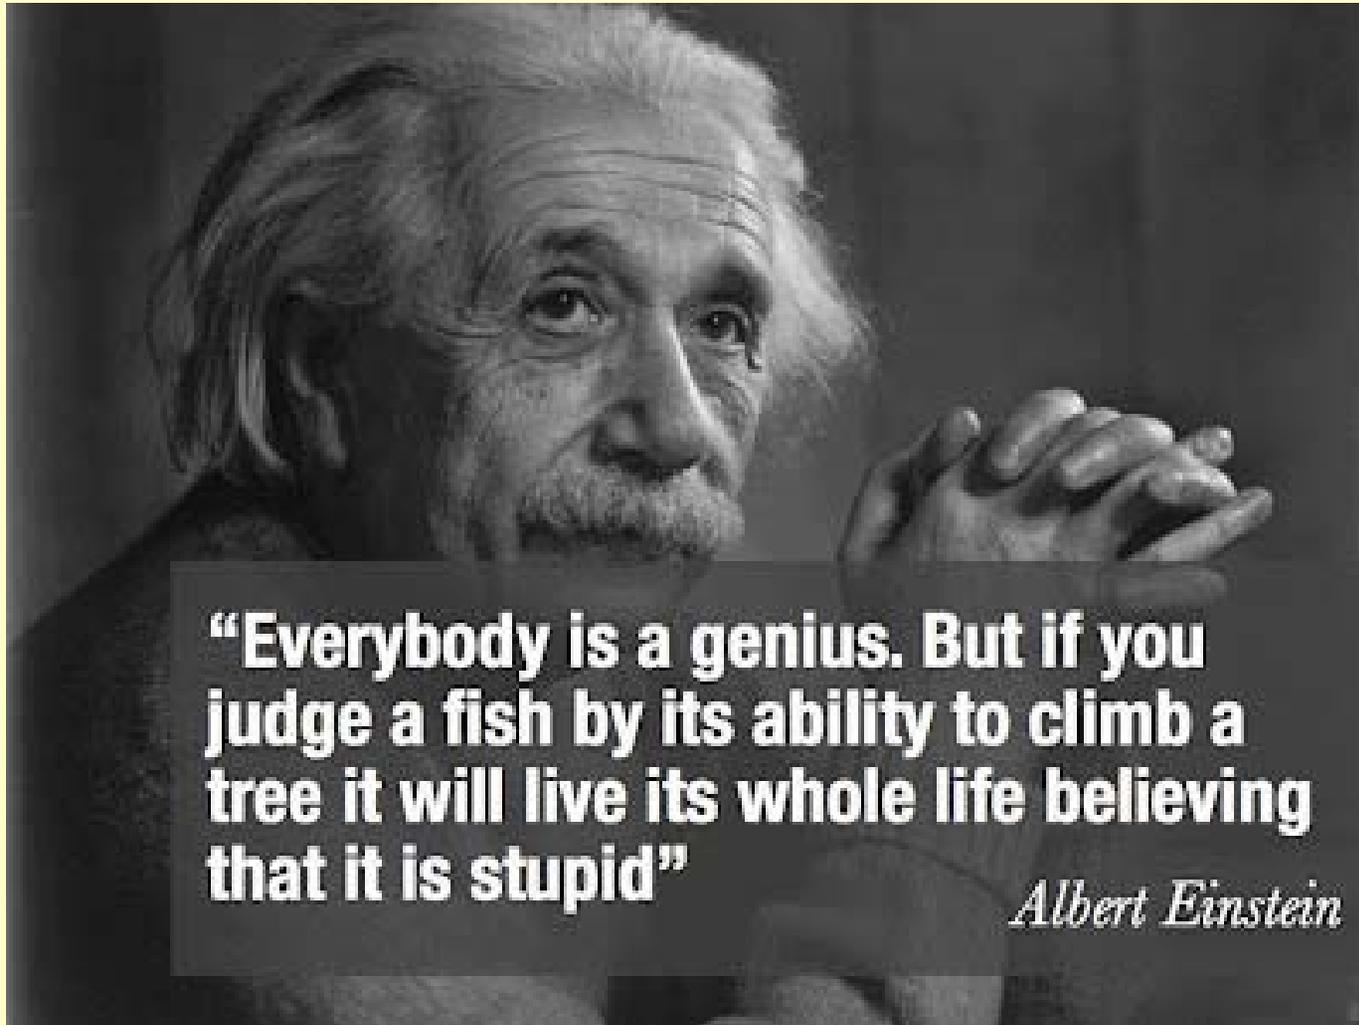

Public water suppliers,
resource managers,
planners, scientists

Workshops, projects, research,
website, reports, emails, personal
communication, outreach

Based on: Wenger, Etienne, Communities of Practice presentation at UF, May 2009

Diversity of Thought & Approaches = Strength and Resiliency

“Everybody is a genius. But if you judge a fish by its ability to climb a tree it will live its whole life believing that it is stupid”

Albert Einstein

About Us

In January 2007, the San Francisco Public Utilities Commission hosted the first national Water Utility Climate Change Summit, which was attended by more than 200 water and wastewater utility executives, government officials, climate change experts and environmental leaders. The purpose of the gathering was to help participants to better understand the impacts of climate change on water-related infrastructure and water resource supplies.

Shortly after the summit, the Water Utility Climate Alliance (WUCA) was formed to provide leadership and collaboration on climate change issues affecting the country's water agencies. Comprised of ten of the nation's largest water providers, WUCA members supply drinking water for more than 43 million people throughout the United States.

WUCA [members](#) are: Central Arizona Project, Denver Water, Metropolitan Water District of Southern California, New York City Department of Environmental Protection, Portland Water Bureau, San Diego County Water Authority, San Francisco Public Utilities Commission, Seattle Public Utilities, Southern Nevada Water Authority and Tampa Bay Water.

Mission

WUCA provides leadership in assessing and adapting to the potential effects of climate change through collaborative action. We seek to enhance the usefulness of climate science for the adaptation community and improve water management decision-making in the face of climate uncertainty.

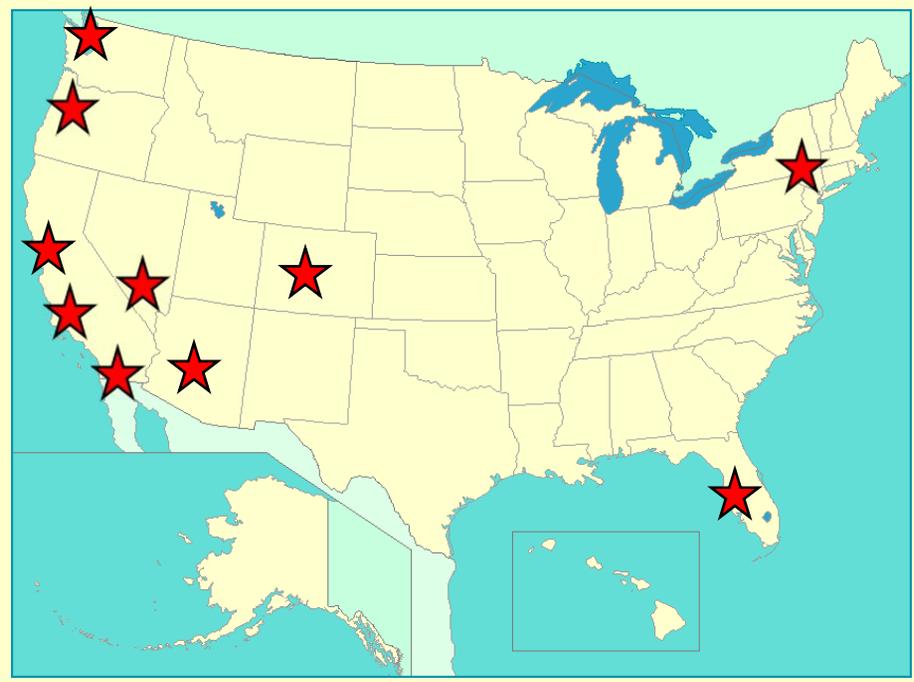

The Lower Crystal Springs Reservoir in San Mateo County, Calif. has become an ecological and recreational oasis thanks to the City of San Francisco's stewardship.

Member Agencies

Agency	Contact	Position
 Central Arizona Project 	Theodore C. Cooke	Interim General Manager
 Denver Water 	James Lochhead	CEO/Manager
 Metropolitan Water District of Southern California 	Jeff Kightlinger	General Manager
 New York City Department of Environmental Protection 	Emily Lloyd	Commissioner
 Portland Water Bureau 	David Shaff	Administrator
 San Diego County Water Authority 	Maureen Stapleton	General Manager
 San Francisco Public Utilities Commission 	Harlan Kelly, Jr.	General Manager
 Seattle Public Utilities 	Ray Hoffman	Director
 Southern Nevada Water Authority 	John Entsminger	General Manager/WUCA Executive Vice Chair
 Tampa Bay Water 	Matt Jordan	General Manager/ WUCA Executive Chair

A Broad Cross Section of 10 Major Metropolitan Water Providers

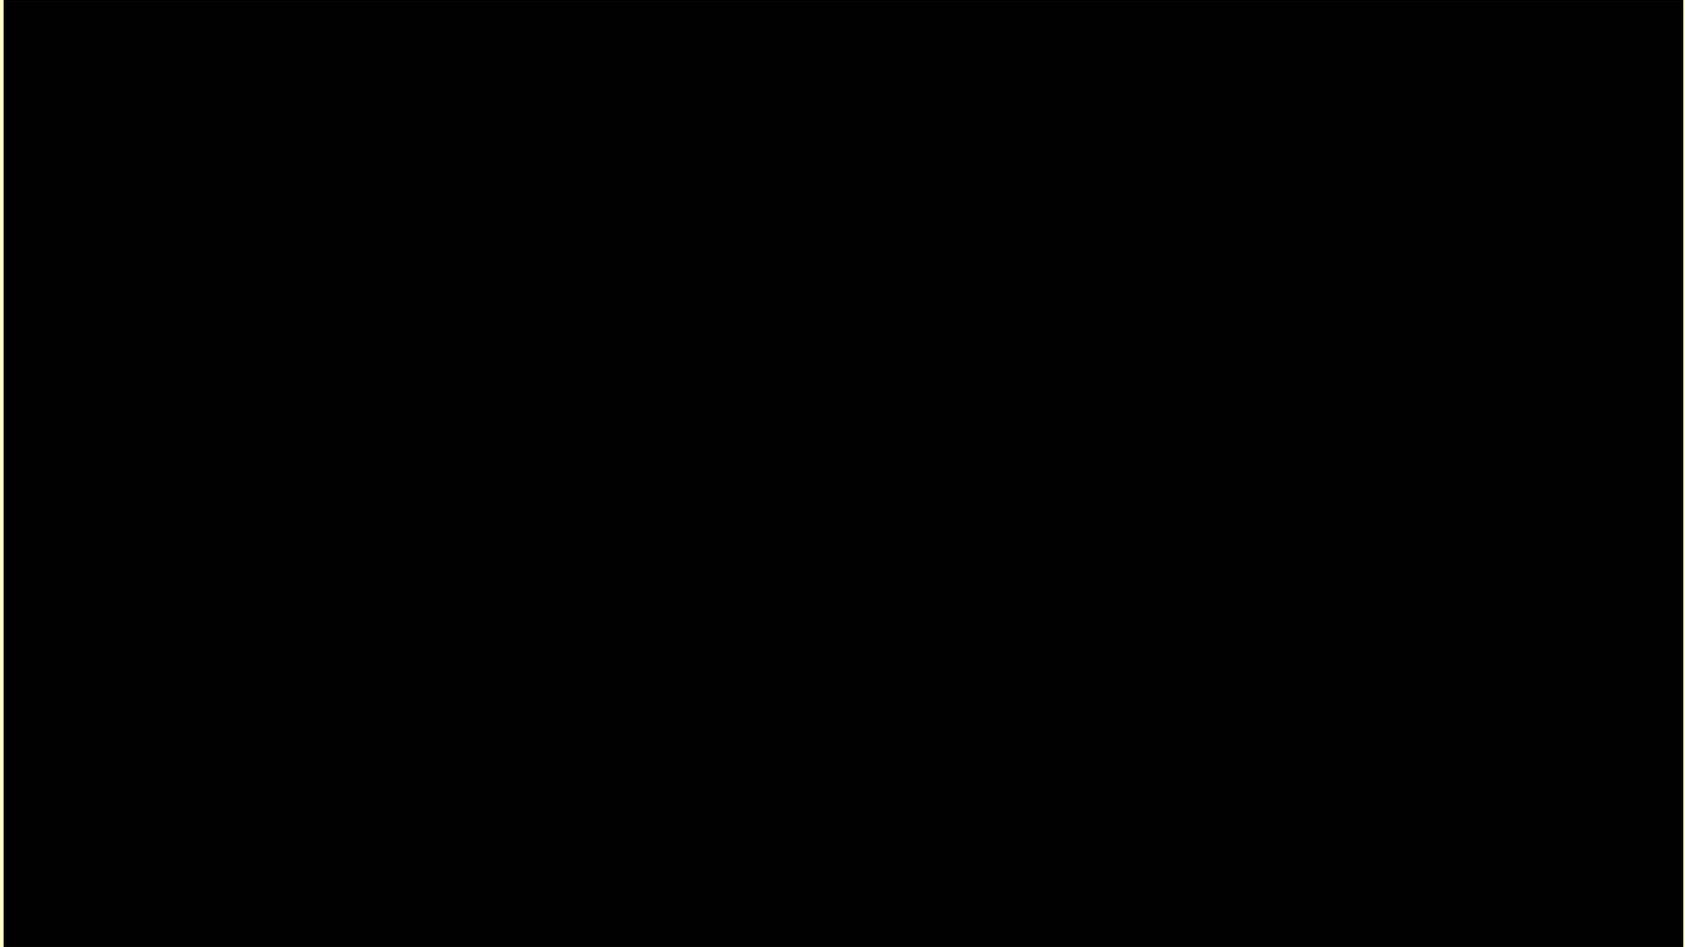

Representing service population of about 43 million people

How Do We Compare?

- Similarities between WUCA and Florida WCA?
 - Potable Water Providers
 - Regionally Diverse
- Dissimilarities – Who is Missing from the Table in WUCA?
 - Water Supply Regulatory Interests
 - Climate Research Science Community
 - Social Scientists and Communication Experts

2 short video clips
to highlight the
importance of
diversity in creating
unique value

Imagine a Band with 14 Instruments
but they are all the Same

Now Imagine a Band with just 4 Different Instruments

Levi Barcourt & The New York Jazz Quartet
MoonDance

- So Am I saying We Make Sweet Music Together?
- Yes I Am!

Other Key Success Factors for the Florida WCA

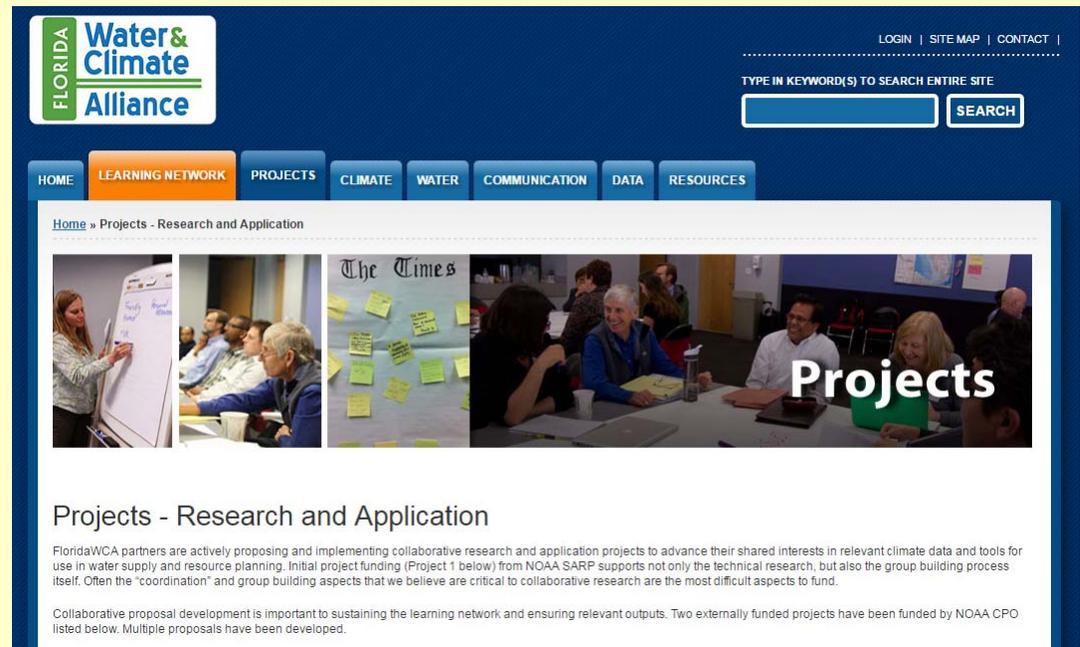

- We have a Narrow geographical focus – the State of Florida
 - This Gives Us Better Consistency with Respect to:
 - Water supply and growth challenges
 - Laws/Rules (compared with 6 western/2 eastern states)
 - Political landscape
 - Societal and Cultural Normalities
 - Better chances for Florida WCA partners to collaborate face-to-face
 - Ancillary opportunities to network at other seminars/conferences

**“IF EVERYONE’S THINKING
ALIKE, THEN SOMEONE
ISN’T THINKING.”**

— GEORGE S. PATTON

Some of Our Accomplishments

- Project 1: Collaborative Development of Public Water Supply Utility Relevant Climate Information for Improved Operations and Planning
- Project 2: Use of seasonal climate forecasts to minimize short-term operational risks for water supply and ecosystem restoration

The screenshot displays the Florida Water & Climate Alliance website. The header includes the logo, navigation links (HOME, LEARNING NETWORK, PROJECTS, CLIMATE, WATER, COMMUNICATION, DATA, RESOURCES), and a search bar. The main content area features a banner with the word "Projects" and a sub-header "Projects - Research and Application". Below this, there is a paragraph of text describing the organization's collaborative research and application projects, and a note about collaborative proposal development.

Projects

Projects - Research and Application

FloridaWCA partners are actively proposing and implementing collaborative research and application projects to advance their shared interests in relevant climate data and tools for use in water supply and resource planning. Initial project funding (Project 1 below) from NOAA SARP supports not only the technical research, but also the group building process itself. Often the "coordination" and group building aspects that we believe are critical to collaborative research are the most difficult aspects to fund.

Collaborative proposal development is important to sustaining the learning network and ensuring relevant outputs. Two externally funded projects have been funded by NOAA CPO listed below. Multiple proposals have been developed.

- Individual Utility Projects Incorporating Climate Change/Variability and Sea Level Rise in Strategic Adaptation Management Planning
- Information Exchange = Organizational and Individual Growth and Development

Learning Network: Participation, Processes and Products

Learning Network

What we are interested in, who we are, and what we do together are all equal aspects of building the FloridaWCA learning network and producing viable, relevant outcomes of mutual interest to the members. Bringing together multiple stakeholders with different perspectives and organizational contexts requires engagement, program and logistical coordination, and mechanisms for feedback. Our encounters must be more than a collection of meetings!

The FloridaWCA employs an iterative process guided by key social learning and educational foundations (E. Wenger's "Communities of Practice" and D. Kolb's Experiential Learning.) We are engaging in a deliberate set of workshops and activities to create learning opportunities for 1) understanding the stakeholders' 2) assessing climate tools, 3) evaluating applicability of tool to water resource and supply operations planning, and 4) actual implementation and using the information for making decisions.

Below you can find information on FloridaWCA organization and formation, including documentation of workshops and other activities. Click on links below.

- [Workshops](#) - Agendas, Reports, and Presentations from each workshop are available here
- [Documents](#)- Documents relating to and facilitating the learning network's establishment, development and growth
