OF THE GULF®**

HISTORIC WETLAND LOSS IN COASTAL LOUISIANA

Estimated land loss from 1932 – 2016:
~ 4833 km² (1866 mi²)

Equivalent to 25% of 1932 wetland area

2017 COASTAL MASTER PLAN

BASIN-WIDE DELFT3D MODELING

PROJECT TEAM

The Water Institute of the Gulf

Natural Systems Modeling and Monitoring

- Model setup, calibration, validation and production runs

Physical Processes and Sediment Systems

- Data collection for model calibration and validation
- QA/QC model output

Coastal Ecology

- Data collection for model calibration and validation
- QA/QC model output

People, Resources & Technology

- Calculation and preparation of land change maps

Collaborators

University of Louisiana-Lafayette

- Development and integration of vegetation model

Louisiana State University

- Geotechnical data collection and laboratory analysis

Deltares

- Support of model setup, calibration and validation activities

PROPOSED SEDIMENT DIVERSIONS

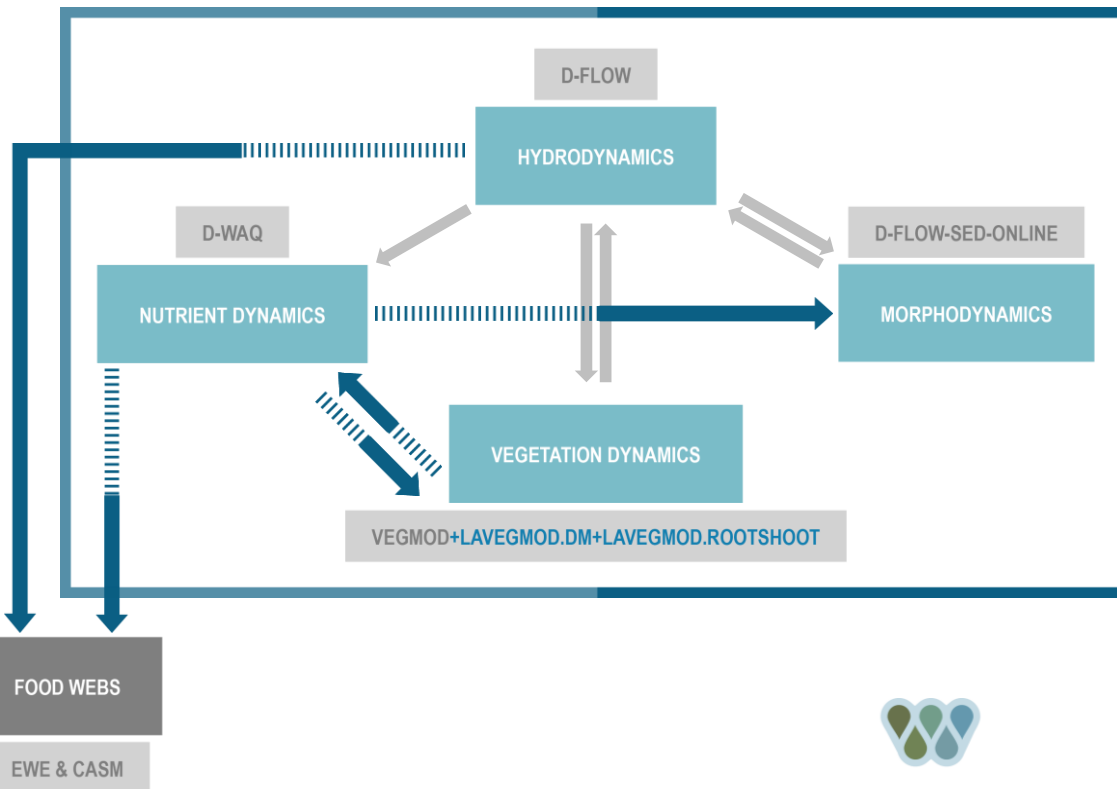

PROJECT GOAL

Produce a calibrated and validated model capable of simulating:

- Land change processes that occur during the creation of a new delta and wetland areas
- Nutrient effects to the wetland vegetation, soil, and the phytoplankton of Breton Sound and Barataria Basin

BASIN-WIDE DELFT3D MODEL FRAMEWORK

VEGETATION DYNAMICS: ORGANIC MATTER ACCUMULATION

SUPPLEMENT EXISTING DATA WITH TARGETED COLLECTION

- **Model Setup**
 - Update bathymetry to build grids
 - Utilize locally observed values within model
(e.g., soil properties, water quality, meteorology, ocean forcing, etc.)
- **Calibration and Validation**
 - Key parameters to tune model performance
- **Improved Understanding of Processes**
 - Compare model outputs to observed basin behavior, ensuring dynamics are captured by the model design
